

# Monterey Bay Nursery

orders: sales@montereybaynursery.com

(un)subscribe: luen@montereybaynursery.com

Current Availability for February 8, 2019

**New this week:**

HYPNOTISING COLOR PATTERN

**Begonia 'Grey Feather'** this is a wonderful foliage variety, tall, fast, durable, with dark blue green leaves accented by bold iridescent silver veins. The leaf-reverses are bright maroon red, foliage hangs neatly at an almost perfectly vertical angle. We've never seen it bloom here, in fact I couldn't even find an image on the Internet, which is telling us something. It is described as clusters of white or light pink flowers but we'll see. Judging from it's vigor and strong, speckled, burgundy canes I expect this could easily reach the eaves of your house in a good, frost-protected location. It is a spectacular, dramatic large container plant for your porch, patio or walkway. Otherwise expect 3-6' tall by about as much wide in part sun to full shade, rich, moist soil, average water use but allow to dry a little between irrigations, no hard freezes. USDA zone 9 (with overhead protection). rev 2/2019 *\*New for 2019!\** in 02G

OUR LOYAL STOCK PLANT

BAT-WING FOLIAGE

**Begonia "karwinskiana"** a real winner! Probably not a valid name, though possibly described but not yet referenced. It apparently isn't *B. karwinskyana*, which *does* appear in IPNI. I found only one online reference to this name, an Ecuadorian nursery website showing leaves of what must be the same plant. Our small, humble stock plant put on a *spectacular* show of small, rich pink flowers in condensed heads at the top of really tall stalks, holding the display well above the foliage. Thick, somewhat iridescent, very dark olive green leaves are angularly lobed, almost bat-wing in overall shape, with a nice, striking chartreuse green eye and typical rich maroon red undersides. Probably initiates from either chill and/or short day - time will tell. Besides indoor uses I'm sure it's fine for porch/patio containers or very protected outdoor planting sites in the warmer parts of California. Typical growing conditions. USDA zone 9 with protection. rev 2/2019  
**\*New for 2019!\*** in 01G

ALMOST READY IN JANUARY!

**Blueberry 'Biloxi'** a very heavy and continuous bearing hybrid with excellent flavor. Considered "no-chill," but my guess is that isn't entirely accurate - it is probably just variety, with excellent commercial production even in very warm tropical or subtropical conditions (Mexico from 1000' elevation and higher). I'd modify that based on our experience here at our nursery to say it is actually highly chill-responsive, as far as initiation-class chill is concerned (55-45F, daylight). But has been documented to do very poorly if it experiences any damaging cold at all (below 32F), with fruit production dropping off noticeably. Very dense habit, covered with flowers and berries all

year here at our nursery, including most of our winters. Best planted with other varieties for better pollination. rev 1/2019 *\*New for 2019!\** in 01G

PINBALL WIZARD

WATERLOO SUNSET

**Dianthus 'Devon Cottage Pinball Wizard' and 'Waterloo Sunset' PP21080** two new additions to Plant Haven's excellent Devon Cottage series, with the same classic, strong fragrance and wonderful blue-grey, disease resistant foliage. All are compact growers, to about 12-14" tall and wide, all bloom for extended seasons. Hardy to USDA zone 5. rev 2/2019 *\*New for 2019!\** in 01G

RETINA-DAMAGING COLOR

EYE PROTECTION REQUIRED!

FLY'S-EYE VIEW

**Dianthus 'Kahori Pink' and 'Kahori Scarlet'** not strictly new, but not in our catalog yet and we've only had trial crops until now. So this is their big hurrah! 'Kahori Pink' is a very intense "blue pink," mauve, etc. whatever you think is appropriate. It is really, really intense, you just can't ignore it. I really like it! rev 2/2019 *\*New for 2019!\** in 01G

I NEED SOME HOT LOVE!

**Dianthus 'Kahori Scarlet'** a light red, but almost as electric, especially in full sun, where it appears mostly rose pink. In lower light the richer red components dominate. Same habit, bloom vigor and everything else we think is fantastic about these Kahoris! rev 2/2019 *\*New for 2019!\** in 01G

**New last week:**

**Cyanotis somaliensis** PUSSY EARS a cute little houseplant or porch/patio container subject, with wonderfully fuzzy, somewhat succulent green leaves closely set on short internodes. Under cool conditions foliage picks up purplish/taupe hues, leaf undersides especially. Shade to part-sun, rich, moist, open potting soils, average watering, cut back if it shows too much leg. Northern Somalia. Commelinaceae. rev 1/2019 *\*New for 2019!\** in 4FL

**Haworthia emelyae** yet *another* cute, irresistible little bundle of neat, tidy, window-leaved joy, easy to grow and reasonably fast but usually reluctant to pup. Most of the plant will remain below the soil surface, the flat leaf surfaces slightly above. It looks best and has the most positive feelings when grown in part sun or bright, diffuse light with intermittent watering. Known from about 10-15 mountain-top populations it is endangered by collecting and agricultural encroachment. Technically our seedling-grown form looks like *v. comptoniana*, based on the lined leaf surfaces and lack of tip spine. This species has also been classified as *H. truncata ssp. (or v.) emelyae*. Cape Region, South Africa. rev 1/2019 *\*New for 2019!\** in 4FL

**Saxifraga arendsii 'Rocco Red'** red, red and red. New hybrids keep getting easier and more durable. The original forms were easy to grow, if you were growing them in fine gravel in a stone sink and watering twice a day, sure they were easy. Try growing them in a warm-wet winter/dry summer climate, on rain birds for two hours three times a week, and let's see what happens. Or put it in a small clay pot, in standard retail potting mix, on your sun-baked back porch. Instead of living just from January through about mid-February, they get tougher and more forgiving every year, and bloom longer, and with truer colors and larger flowers. The reds have always been the weakest in any series, being the farthest from the wild type. This and 'Touran Red' (also on availability this week) are the best reds we've grown so far for color, vigor, disease resistance and flower power. rev 1/2019 *\*New for 2019!\** in 01G

4FL = 4" pot, 15 per flat  
 6FL = 6" pot, 6 per flat  
 QT = quart pot, 12 or 16 per flat
